# Nguyễn Thiên Vũ

Business Systems, Automation & Web Operations

Location: Ho Chi Minh City, Vietnam
Email: thienvunguyen131@gmail.com
Current: ANCARAT · 2024-Present
Focus: E-commerce systems · Automation · Data & reporting · Web operations
Portfolio: github.com/vaicauchuyentreninternet-crypto/thien-vu-portfolio

## Summary

Business systems and web operations practitioner working across e-commerce, automation, data and practical web tooling. I start by understanding where a process slows down, then structure the inputs, rules, exceptions and handoffs before building a system that is easier to run, measure and improve. At ANCARAT, my work spans product data, internal tools, reporting, campaign execution, measurement and ongoing website operations.

## Core Competencies

Business & e-commerce systems — catalog operations, product taxonomy, variant management and operational tooling.
Automation & workflow design — process mapping, trigger and routing logic, internal automation and AI-assisted tasks.
Web operations & measurement — landing pages, HTML/CSS/JavaScript, GTM/GA4 setup and campaign support.
Data & reporting — Google Sheets, dashboards, data mapping, synchronization and automated reporting.
Operational scale — 200+ workflow projects, 20+ rapid code/no-code builds, 200K+ rows structured and 10M+ data points handled.
Workflow thinking — collect process automate distribute improve, with clear states at each handoff.

## Professional Experience

**E-commerce Technology / Web Systems**
ANCARAT
2024-Present · Ho Chi Minh City

- Designed and delivered 200+ automation and workflow projects, from focused operational helpers to connected processes used in daily work.
- Built 20+ rapid code and no-code solutions across landing pages, internal tools, workflow interfaces and operational support.
- Structured 200,000+ rows and worked with 10M+ data points across dashboards, reporting logic and operational analysis.
- Built recurring reporting flows that synchronize data, refresh working views, send summaries and route role-specific information.
- Supported website and product operations alongside campaign execution, measurement and reporting, improving the tools used around each process.

## Selected Systems

**E-commerce Catalog Operations**
Connected product data, taxonomy, variants, content, publishing and measurement across 2,000+ product records, 1,600+ variants, 200+ attribute groups and 20 primary filters. Tools: Odoo 17, Google Sheets, JavaScript, GTM, GA4 and AI-assisted workflows.

**Event Registration & Operations Flow**
Built a form processing queue email QR reward workflow to reduce manual handling across registration and on-site operations. Tools: Microsoft Forms, Power Automate, spreadsheets and browser/QR workflows.

**Customer & Revenue Reporting System**
Built segmentation and dashboard logic for revenue, orders, customer groups and dealer behavior, including new vs returning, ranking, inactivity, cumulative revenue and channel context. Tools: Google Sheets, data mapping and reporting workflows.

## Selected Web Work

Vietnamese Women's Day — campaign landing page combining product structure, editorial content and responsive execution. Con Rồng Cháu Tiên — campaign experience combining product placement, content flow and interactive components. Như Ý by An — collection experience structured around gifting, product discovery and consistent editorial flow.

## Tools & Technologies

Odoo 17 · Google Sheets · HTML · CSS · JavaScript · Google Tag Manager · GA4 · Microsoft Forms · Power Automate · Dashboards · Data mapping · QR/browser workflows · AI-assisted workflows · Node.js / Express / SMTP prototypes

## Working Approach

I work best where operations and technology meet. I learn quickly, prototype fast and stay close to the people who use the workflow. The goal is practical: fewer repeated steps, clearer information and systems that remain understandable and maintainable in daily operations.

## Measured Impact & Applied AI

Catalog automation — from ~60 to under 7 minutes/product in one GenLogin flow (>88% less time).
Parallel profiles complete 200+ full products/day: images, categories, copy and attributes.
A four-person manual team completes ~50 description-only records/day (scope differs).

Reliability — 24/749 observed exceptions (~3.20%), auto-requeued; not a terminal-failure rate.
Built-in validation/test branches; 19 source-inspected exports (2,489 nodes, 51 JS/Eval steps).

Applied AI — ChatGPT/Gemini catalog QA; Hermes Windows gateway, local browser/Discord setup; Ollama/Qwen inference; Docker and OpenHands agent experiments (local R&D, not deployed).
